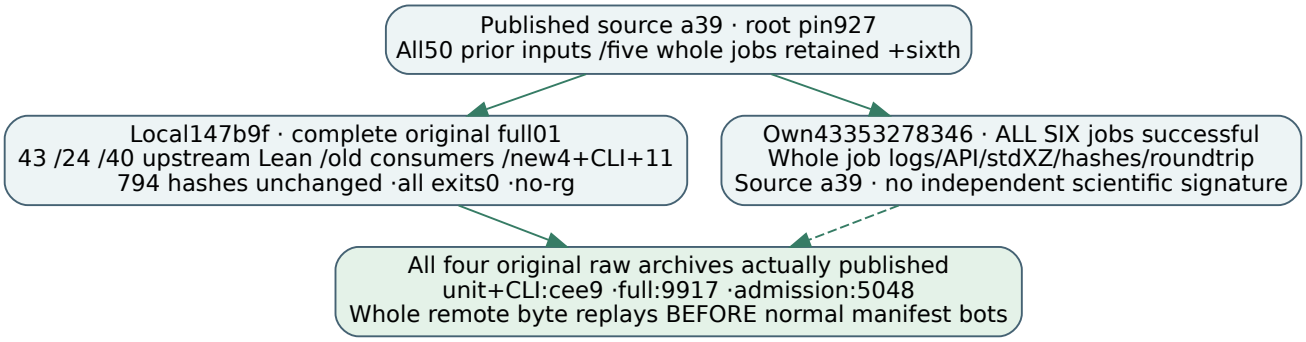
Complete chain: own six-job CI

Exact source a39 · scheduled03:25UTC · f507c9 /root6321c6 · unsigned

Own43353278346 succeeds at ALL SIX jobs. Complete UTF8 logs/API/standardXZ/raw and archive hashes/exact roundtrip are retained. The five old jobs remain;the sixth adds the complete F101 chain. Scientific standing remains unsigned. [pcc:unverified]



Job	Tests	Proof scope
reference	25 +98 +5;one OLD ignored	no Lean
independent	32 /23	32 modules186 compiled
partial	35 /23	35 modules203 compiled
proper	41 /23 /kernel4CLI	39 modules224 compiled
norm	43 /24 /kernel4CLI /norm4CLI	40 upstream238 +11 consumer
NEW chain	43 /24 /kernel4CLI /norm4CLI / chain4CLI	40 upstream238 +11 old +11 new

All proof scopes have zero trusted axioms. New job TOTAL42 modules260 compiled includes two consumer11 modules;upstream remains40/238/212 written. Both old JSON comparisons,eleven exact identity outputs and all final source guards pass. CLI is bounded36 fibres;the four tests supply both independently enumerated12,317-class domains. [pcc:unverified]

Local147b9f's no-rg observation is separate from uninstrumentedCI. Same norm-diagram/injectivity comparison with existing196 chain,partial geometric formalization,no independent R20 reconstruction/global inverse/timing or solver advantage. Current main/ledger/signing/merge gates are separate. [pcc:unverified]

All original raw archives actually published

Whole object	Bytes / SHA prefix	Root manifest bot
unit794 files	2412572 /8ec2a0e4	cee9
CLI795 files	2412084 /26c3048e	cee9
full1012 files	2451524 /9f0b2e6e	9917
admission109 members	130472 /0250a35b	5048

Each original tree is ONE standardtarXZ with every member/raw/archive hash and exact roundtrip;native caches are separate. The trusted-base workflow replays whole remote bytes BEFORE normal manifest bot pushes. No split/prune/fakepointer/policy override. [pcc:unverified]

Full43356854601/ job131660813332:one object before9917ca568e3125dec81a9caaf01f0caeb741288d;exactFF0/artifact0/wiring0. Whole426089UTF8 log/XZ43360 and assembled receipt tree/XZ49548. Admission43358286544/job131665457719:one object before5048bf29c7757af3c812a60a5f29c9cf47d23e0e;exactFF0/artifact0/wiring0. Whole425982log/XZ43284 and assembled receipt tree/XZ49336. Canonical manifest paths/full hashes/S3 keys are in REPORT.md-linked custody. Followup no-ops are not upload proof. [pcc:unverified]

Original unit/admission claims retain exact raw-file subjects through genuine published object entries and PCCgate/sign hydration. Canonical order is docs,admission,unit. One PCC data-input workflow changes after a39;other793 runtime/proof/focused-workflow inputs match the original full snapshot. FULL01′s original794 terminal guards all passed. Verifier/trust allowances are unchanged;4e11ac packaging governance passes all scoped checks. [pcc:unverified]

Preserved failures:130KB admission archive crossed the actual data threshold;publication resolves that packaging gate. Wiring02 required sorted arguments;original tool fixes ordering and governance03 passes. Collector01 expected one five-test row;the frozen baseline already has1+1+1+2. Corrected metadata parser preserves old outputs,no native criterion changes. Earlier failures remain immutable in unit custody/report. [pcc:unverified]

REPORT.md links exactCI logs,all publication/native receipts,written proof,data-read snapshots and failure records. EditableDOT/SVG/recordeddata/renderer/Typst are included. No mathematical graph/cost edge/IC timeline change. Next source-backed transfer/descent task;review existing native GHS/Ciani/plane-quartic code first. No new attack or measured advantage claimed;main merge/signing and benchmark budget/admission requirements stay open. [pcc:unverified]
