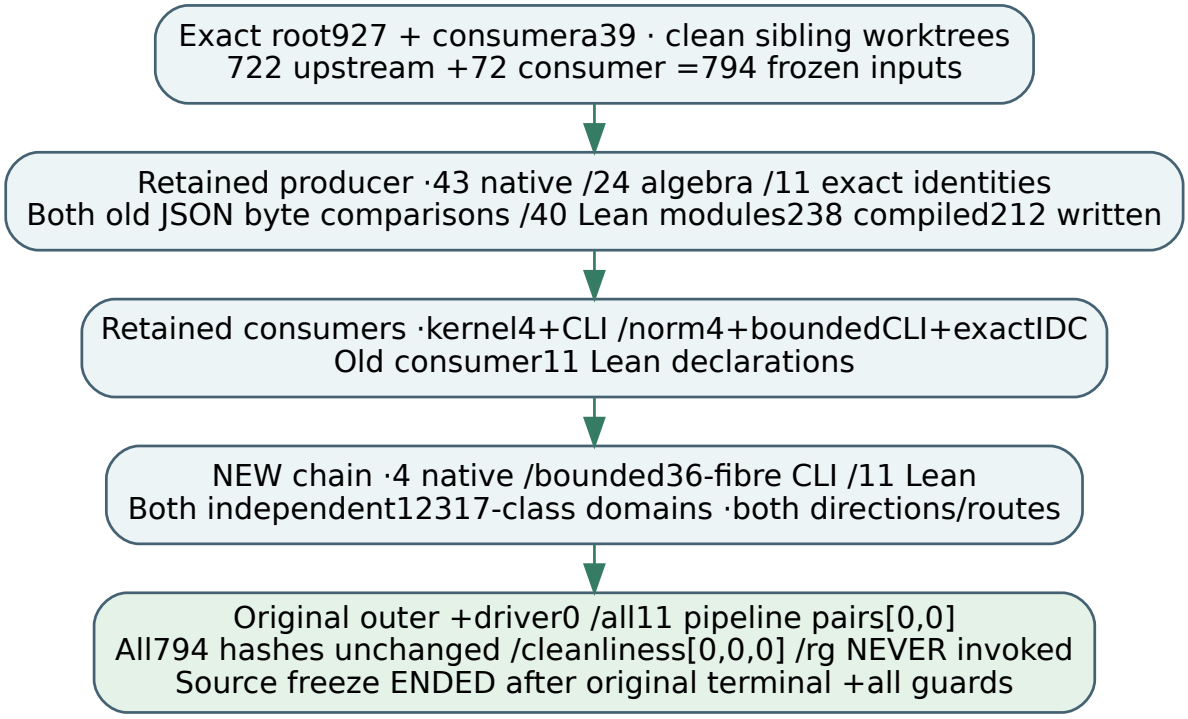
# Complete F101 chain: full replay01

2026-11-13 · sourcea39 / root927 · local147b9f · unsigned

Original02:38:22Z→02:52:52Z,outer/driver/original exits0. All11 phase pipeline pairs[0,0],all794 hashes unchanged,cleanliness[0,0,0]. The always-failing rg shim is NEVER invoked. Source freeze ends only after the original terminal and all guards. These timestamps are custody evidence,not performance measurements. [pcc:unverified]



Both independently enumerated12,317-class domains,both inverse directions/public routes,norm diagram,group/Frobenius/all109+113 scalar images/orders and full fibre/negative controls are included. CLI is a bounded36-fibre smoke test. Upstream40 modules238 compiled212 written and the two separate consumer11-declaration modules all have zero trusted axioms. No original test/job is removed. [pcc:unverified]

Fresh same-run native cache is outside the raw tree. Exact release e4677639d1193d1b and debug532e835cc7326ae3 fingerprints/source snapshots are retained. ONE complete1012-file source/log/command/receipt/proof-output tree is2,451,524-byte standardtarXZ,SHA9f0b2e6e…;raw tar16,281,600/SHA576babf1… . Every member/raw/archive hash and exact roundtrip is preserved. Member indexXZ41,524 is metadata,not a raw split. [pcc:unverified]

The full archive is intact locally PENDING actual documented root upload/whole remote byte replay/real manifest. Earlier unit+CLI publication953892/root973bee/canonicalcee9 does not prove this new object available. Own six-job CI43353278346/exacta39 remains separately pending,next03:25UTC. [pcc:unverified]

REPORT.md links full raw custody,frozen8f3da8,writtenf97916,unit/failures/proofa2ebd5 and admission0556d8. Editable DOT/SVG/counts/renderer/Typst are included. Actual geometric formalization remains partial;existing196-chain comparison uses the SAME norm diagram/injectivity. No timing,solver advantage,global inverse or new attack claim. Next actual raw publication/CI checkpoint and the next unblocked research task. [pcc:unverified]
