Frozen plan before launch
4 registered prime curves, 8 public targets each
9 arms; 1 warmup + 5 measured rounds = 1,728 executions
Actual native hashed-ecdl-tensor
source | selectors | exact width | partial relations
Cold setup / bases / network build / contraction
witness and row checks / elimination / recovery
Group calls counted; diagnostic meter work incompletely priced
Development controls
Native certificate + RNG + work invariance
Independent scalar checks; seeded success/exhaustion replay
GATE: current-source S3 checkpoint + readback
Temporary existing OIDC identity; actual permission unverified
GATE: exact source / native binary / OCI image
Authenticated publish and execution receipts pending
One EKS Spot native L2 session (not launched)
c8a.2xlarge; 4 vCPU / 4 GiB; original 1,800 s
Retain all failures; no measurement retries
Native replay-all / L2 / A-A / S3 hashes
Complete admitted pairs only; report every unknown
Challenge scalars and general audit remain open
