Official Certicom ECCp-131
p, a, b, n, h=1, public P and Q
Validated prime-field arithmetic
Canonical compression: 2x + (y mod 2)
Field constraints
a*b = q*p + r; canonical ranges; carry guards
Point validity and addition constraints
Identity, inverse, doubling, generic cases
Slot hash membership and point sum = published Q
Two slots, seed 1: 1,564,506 edges; degree 1,032
Shared scalar Boolean-tensor engine
Default u0=0: exact-leaf budget exhausted
pending
Challenge relations and recovered scalar
UNRESOLVED
