Frobenius on E[ell]
ell = 2 mod 3, det M = q^3
recognition
M split semisimple
scalar or two distinct rational eigenvalues
proved equivalence
Stable transverse Lagrangian
explicit module basis
standard isotropic quotient
Principally polarized quotient
no curve equation yet
needs geometric checks
Smooth genus-3 target + source twist
indecomposability and reconstruction open
needs evaluated homomorphism
Explicit prime-subgroup / planted-log transfer
not performed
