Review addendum: PR #1176

Date: 2026-10-29. Certify j=1728 source-field discriminant and index gate.

Original author head: 08356b1f38ea889f5a70447f2ca28759a2ab4ece. The original study and every frozen source, protocol, result, failed attempt and timing cap are preserved. This addendum takes precedence over unqualified experimental-status language in the archived report.

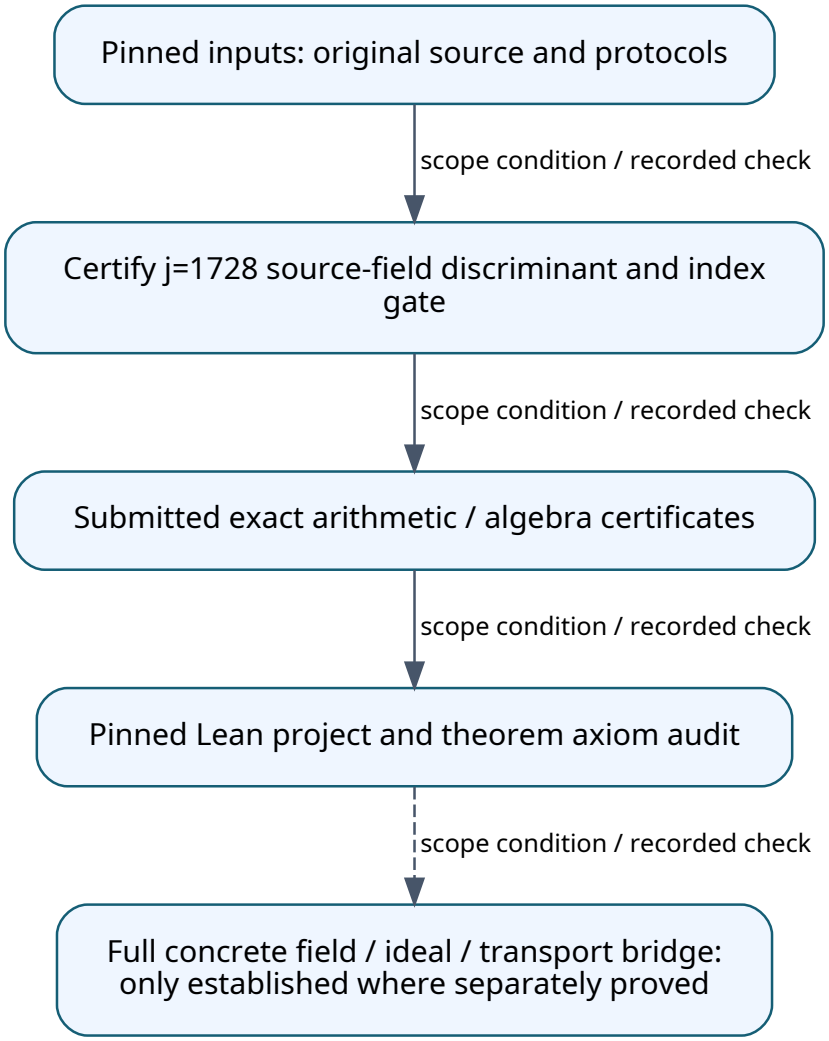

Recorded finding and its scope

The degree-18 j=1728 source field has exact discriminant **2^18 · 3^45**. Among the primes common to the relative-discriminant and conjugate-resultant roots in the preceding experiment (../../experiments/hecke-432-j1728-root-prime-support-20261026/RESULT.md), only 2 and 3 ramify in this source field. The remaining common primes 7, 11, 23, and 31 are absent from both the source-field discriminant and the index of Z[α] in its maximal order. Thus their appearance in the factor-discriminant roots comes from the factor extensions or their relative geometry, rather than ramification of the degree-18 base field.

The paragraph above describes the retained certificate record, not a new experiment. Source: experiments/hecke-432-j1728-field-index-gate-20261026/RESULT.md (../../experiments/hecke-432-j1728-field-index-gate-20261026/RESULT.md). This review treats publication of protocol and results together as retrospective/exploratory unless an independent earlier publication witness is supplied. An archived PASS_PROSPECTIVE status is a literal historical label, not evidence of pre-observation registration. In particular, PR #1164's six-row holdout and PR #1190's 62/62 correctness checks retain their numerical results with this qualification.

Evidence-linked explanation

Evidence and proof boundaries for this study. Symbols C, B, E and K denote the frozen coordinate models or coefficient field, not newly registered subgroup instances. This diagram records algebra/certificate dependencies; it does not introduce a verified isogeny edge, EC1 identity, ISO1 route, or ECDLP transport claim.

Replay and proof map

The exact manifest binds 20 files in this study. The shared project pins Lean leanprover/lean4:v4.35.0-rc4 and Mathlib 021c46bdd042f67b538b9f9871d556a93713a9a9. All 37 original modules, 113 requested declaration reports and 142 noninternal theorems passed the integrated proof replay; this does not formalize every concrete Sage/PARI field or ideal interpretation. The source manifest and proof map are tools/ci/quartic_certificates.json (../../tools/ci/quartic_certificates.json) and the original integration report (../ci-repair-quartic-20261027.md).

This study's original modules: experiments/hecke-432-j1728-field-index-gate-20261026/formal/FieldIndex.lean, experiments/hecke-432-j1728-field-index-gate-20261026/formal/GramChangeBasis.lean.

A new portable replay ran all 42 original integer auditors successfully in a disposable canonical-layout container. The checkout was read-only and all 1,404 original input hashes were verified before and after replay. See portable replay evidence (portable-replay/results.json). The separate field-index successor runner uses new output directories, unchanged source/protocol bytes, original timeout limits and the checked Sage launcher. Preparation and I/O controls are not a new Sage experiment.

Remaining obligations and graph review

Arithmetic table certificates and universal ring/permutation identities retain their precise hypotheses. Concrete number-field encodings, integral bases, ideals, Hensel lifting and Frobenius interpretation require their own bridges. No security, speedup, prospective-validation or general impossibility claim is added.

- Open, indexed obligation: hecke432-field-index-integral-basis-bridge (../../problems/hecke432-field-index-integral-basis-bridge.md).

The candidate catalog, volcano-IC figure set and paper figures were checked for affected links. This is a review and portability correction with no new surviving graphable mathematical fact; canonical graphs remain unchanged. The precise checked-path inventory is graph-review.json (graph-review.json).
