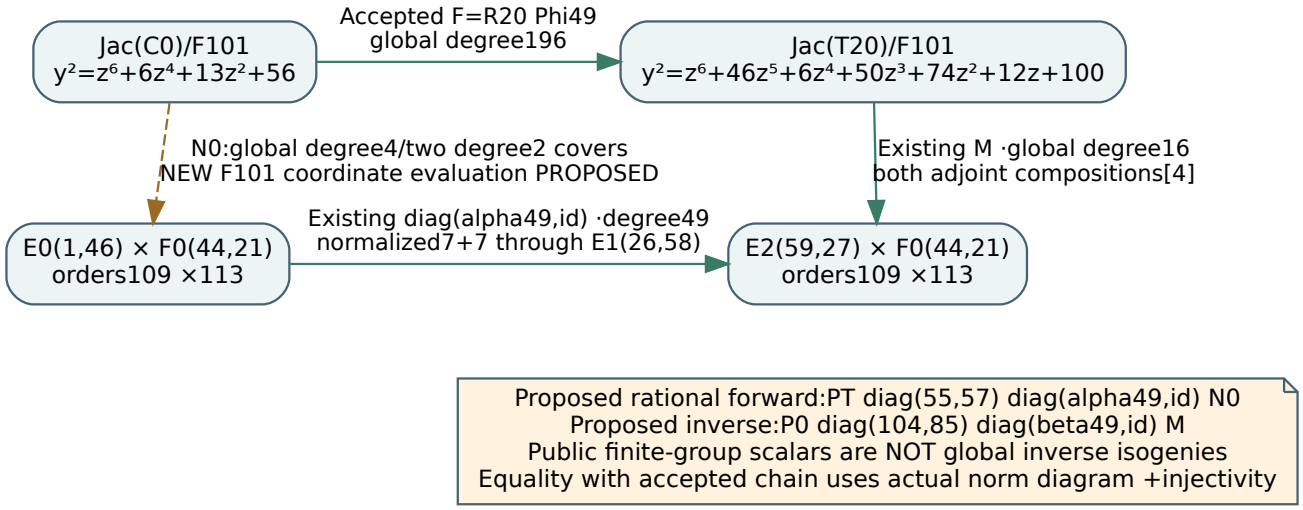
Complete F101 C0↔T20 adapter:prospective protocol

Frozen8f3da8 before code/runs · parentb9d9be7/ready1519 · root927a4efe

The accepted global chain has degree196. Propose a complete F101 coordinate evaluation through its known norm/isogeny diagram,with an explicit finite rational inverse. The dashed edge's new evaluator is PROPOSED,not new native acceptance. [pcc:unverified]



C0 covers:(z²+2,y) and(56/z²+38,56y/z³). New degree2 pullback usesplus=nplus;existing T20 degree4 usesplus=nplus−1. Predict a repeated finite z0 fibre atE0(2,±37),and TWO signed infinities with empty finite part atF0(38,±56). Keep the original multiplicities. Runtime uses existing F101/poly/genus1Cantor/ Model and original SevenEdge;independent F101² support oracle is validation only. [pcc:unverified]
