

cold segments C1..C20: one fresh pinned process per arm on new point s$(i-1)$ (role indexlift-cold-v1)

cP baseline	cPaa A/A	**cPI** candidate	cPIT + sampled self-test	cPIX planted	rT tuned rho

rank blocks K1..K3 (new seeds 401..403); factor-log table = B's

kP rank stage, selected index	**kPI** rank stage, lift_scan index

Primary (frozen), shared rank stage:

$K = \frac{1}{2}(\mathrm{rank}(kP) + \mathrm{rank}(kPI))$ over the blocks

$$R = \frac{K + \overline{\mathrm{cold}}(cP)}{K + \overline{\mathrm{cold}}(cPI)} \quad \text{(end-to-end cold)}$$

improvement iff 95% lower bound > 1; bootstrap: blocks, attempts shared within a block, points paired.
Controls: A/A cP/cPaa; sharing kPI/kP per attempt in [0.97, 1.03]; planted cPIX/cPI lower bound > 1.
