
model A: archived run 39214027289 constants, probe law $r/(166 \cdot 83K^2)$
model B: A with the local K220/K600 per-state and per-probe exponents
archived rT770 mean cold (2.59 s, 20 points)
K600: 22.60 s
K_{opt}=220: 6.04 s
predicted end-to-end cold (s)
