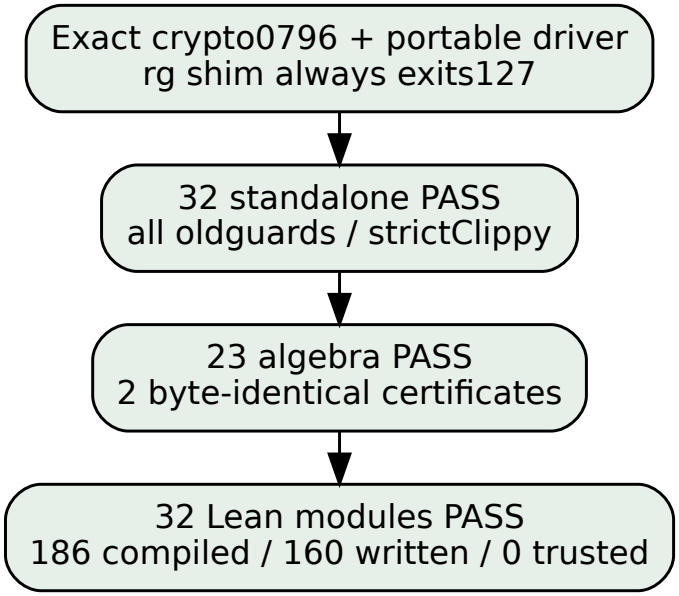
Complete portable replay04

2026-11-12 · exactcrypto0796 · claim22ad5d/root8533ad · unsigned

With an always-failing rg shim on PATH,the portable driver passes every complete32native/23algebra/two-certificate/32Lean-module criterion. The gate reports186 compiled theorems,160 written declarations,zero trusted native. All695 upstream and9driver hashes remain unchanged. [pcc:unverified]



The diagram records complete correctness coverage,not timing or equal-cost arms. Native counts have zero failed,ignored or filtered tests.

Exact correction and controls

Failed8f CI43232186220 passed original25native/98reference+five,one oldignored; independent32 passed then exited127 because rg was absent. Algebra/proofs did not run. Whole two-job logs/API/ custody55e8da and inspected failedCI report bcde35 remain immutable. Root0796′s green workflow is a separate result. [pcc:unverified]

V4 changes only three textparsers to equivalent portablegrep/glob and adds pre-output tool checks. WrongHEAD,dirtyJSON and missinggrep all reject2 before outputs (b68790). All13 oldRust/ check.sh/75a pin,independent0796 pin and both original CIjobs stay unchanged. No cryptographic engine or acceptance filter changes;–locked and zero-trusted remain required. [pcc:unverified]

Whole custody and next gate

The entire129-file raw/source/shim tree is one55,488-byte standard tar.xz with per-file SHA256 and exact roundtrip,under evidence/independent-positive-04. It retains commands,source snapshots,guards,start/finish,status and logs. Reproduce on separate clean0796 with Rust1.99.1/ Lean4.35.0 and a fresh output directory. Cached compilation and custody timestamps supply no benchmark. [pcc:unverified]

INDEPENDENT_REPLAY_REPORT_V2.md links each requirement and source. KB/atlas unavailable;fallback is exact source,failed job,V4 and accepted earlier evidence. The original98 was not rerun locally because its actual8f reference job succeeds. The fixed1509 head still needs new CI of both entirejobs before the input-closure problem resolves. Scientific signing,ledger/C and costs remain separate. Publish the concretefix,then resume unbalancedprotocoldc75fb. [pcc:unverified]
