Source model: F512 modulus 515
y^2+xy=x^3+a*x^2+59, a=0/1
traces -35/+35; r=137/239
No selected subgroup generator
rational-point correspondence
A = Res(F512/F8) E
Weil polynomial T^6-t*T^3+512
existence; degree 53^3
isogeny-class relation only
no evaluated map
Transverse 53-kernel: abstract module
Written CM proof: quotient indecomposable
One arithmetic twist is a Jacobian
polarized identification missing
33 explicit smooth O3 quartics over F8
30 at t=-35; 3 at t=+35
Same Weil polynomial; raw count replays
